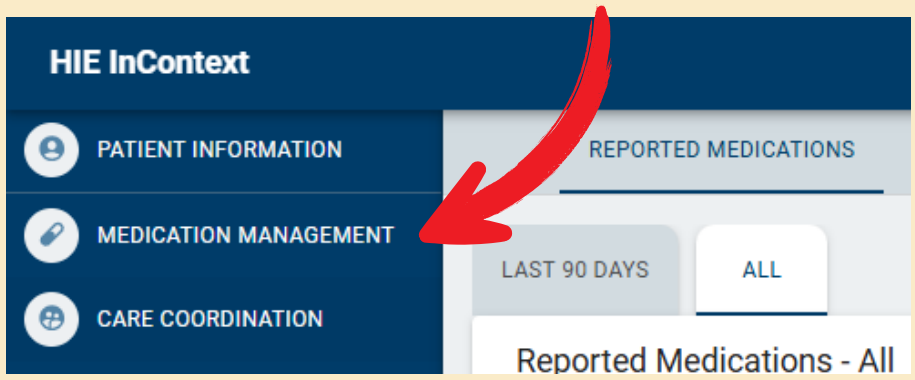
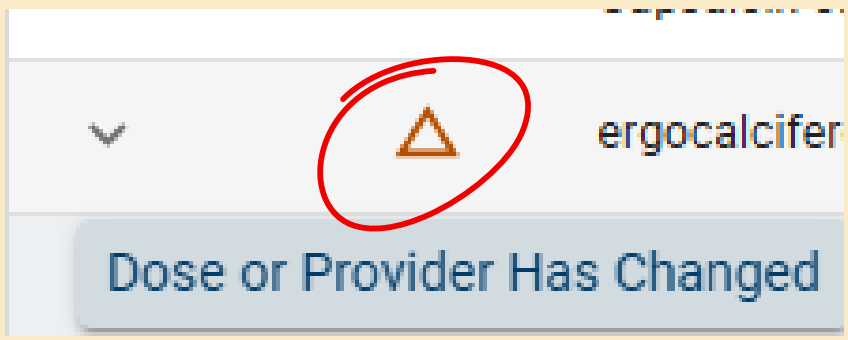
Helpful tips from the WVHIN

WEST VIRGINIA HEALTH INFORMATION NETWORK

Medication Management

Within InContext, you can access a consumer's list of *Reported Medications*. This tab will allow you to view either the Last 90 Days of reported medications or All reported medications. Within these subtabs, you can view the medication generic name, medication name, dose, frequency, route, start date, and last reported date.





If you see an orange triangle next to the medication name, this is an indication that the dose or provider has changed. Click on the arrow to the left to open a drop down that shows the change.

Please note: The medication tab shows prescribed and "reported" medications documented in the consumer's medical record, not dispensed. Medications found in the Medicaid Claims tab are dispensed.
