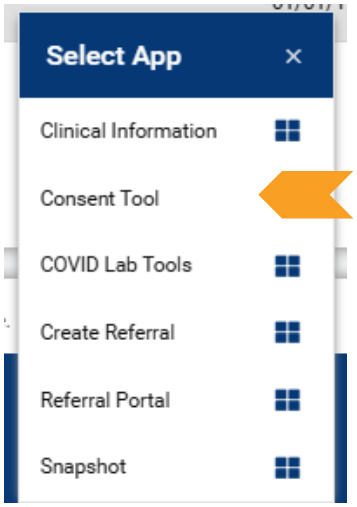
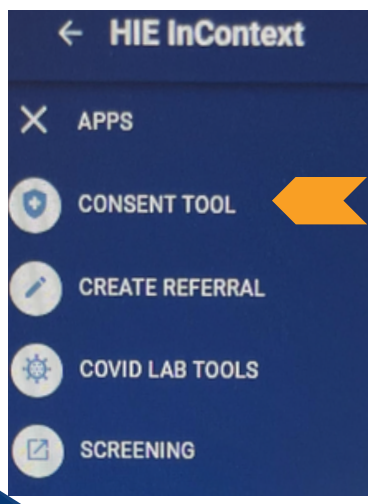
Helpful tips from the WVHIN

Consent Tool





The Consent Tool is a solution to enable the electronic exchange of substance use disorder (SUD) data protected by 42 CFR Part 2. This tool supports the WVHIN's goal of sharing behavioral health information protected by 42 CFR Part 2 across a patient's care team, including physical and behavioral health providers, to enhance and improve patient care coordination.

Key Features:

- Providers can access the consent tool directly through the portal or via InContext.
- Consent is collected at the patient level. Any provider or payer with a care team relationship with the patient can ask a patient to register a consent to share 42 CFR Part 2 covered data via the WVHIN. Once a consent is registered, any Part 2 data in the WVHIN is shared with the patient's care team.
- The form is signed electronically by the patient and the provider attests to education and verification of patient ID. (Telehealth workflow also available.)
- Consent can be set to expire and can be revoked at any time by the patient.
- Allows SUD information in WVHIN to be shared with the patient's care team for treatment, payment, and care coordination.
