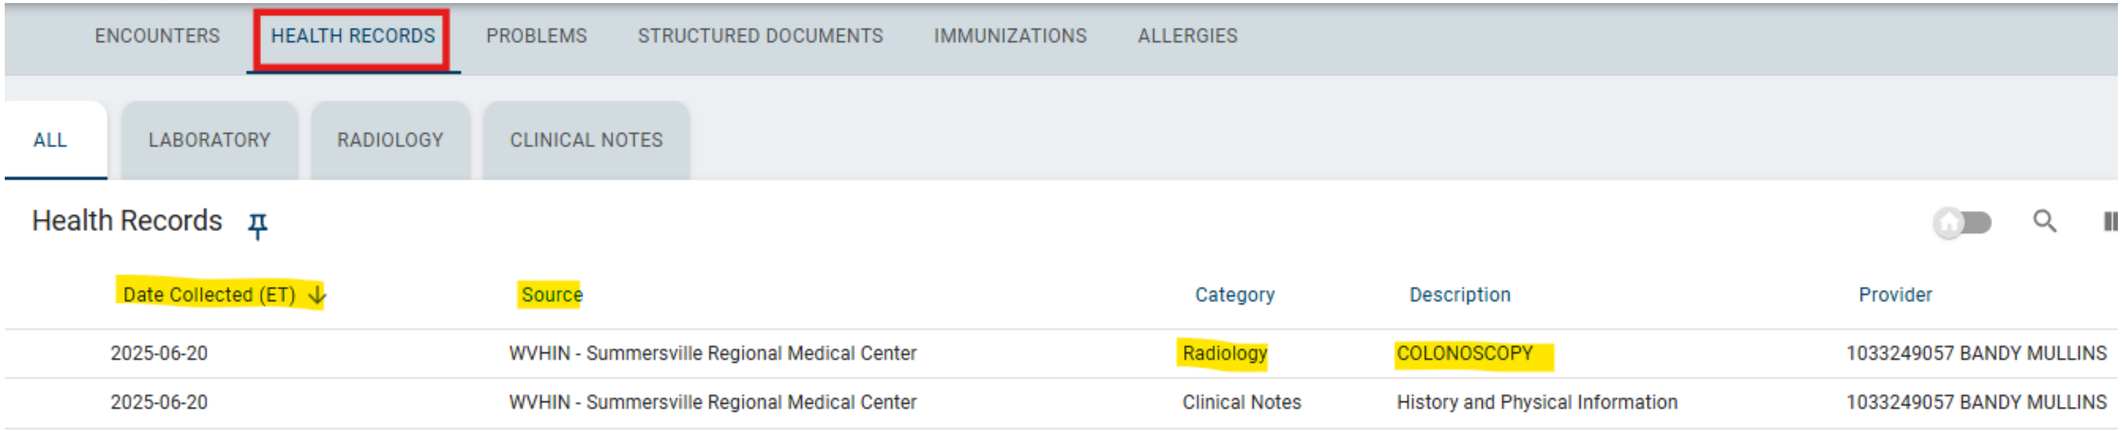
- Plan of Treatment
- Procedures
- Results
- Visit Diagnoses
- Admitting Diagnoses
- Administered Medications
- Active and Recently Administered Medications
- Additional Health Concerns
- Care Teams

How to Find Corresponding Source Document: Diagnostic Report

- **Diagnostic Report:** Clinical Info -> Health Records Tab -> Select procedure note using date/source listed



Procedure:

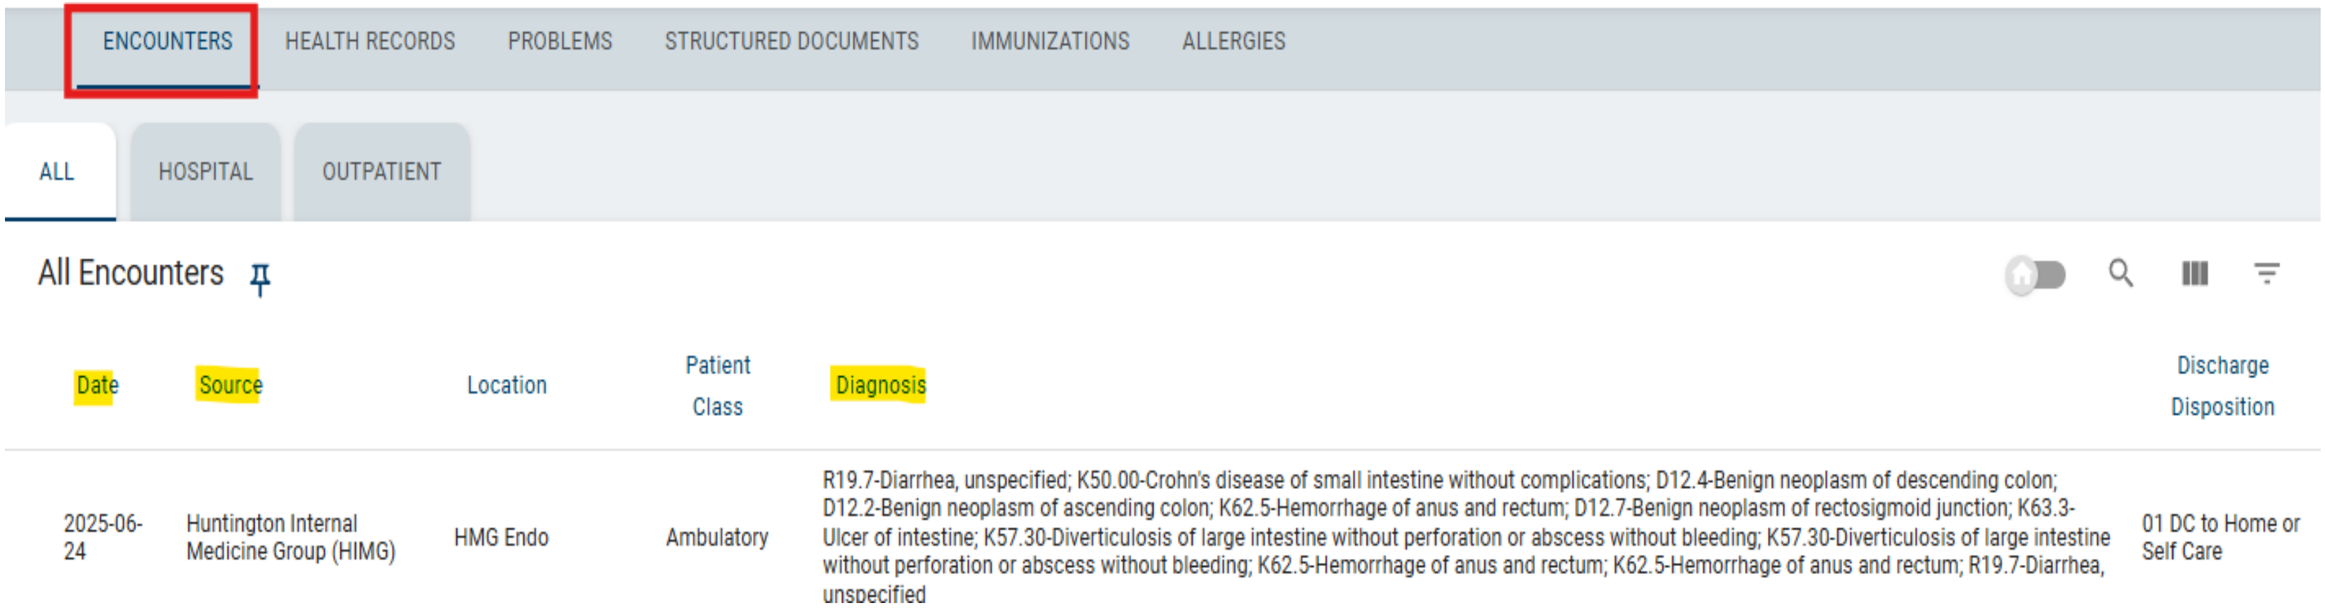
After I obtained informed consent, the scope was passed under direct vision. Throughout the procedure, the patient's blood pressure, pulse, and oxygen saturations were monitored continuously. The Colonoscope was introduced through the anus and advanced to the cecum, identified by appendiceal orifice and ileocecal valve. The colonoscopy was performed without difficulty. The patient tolerated the procedure well. The quality of the bowel preparation was good.

Findings:

The perianal and digital rectal examinations were normal.
The colon (entire examined portion) was significantly tortuous.
Advancing the scope required using manual pressure.
Multiple medium-mouthed and small-mouthed diverticula were found in the sigmoid colon.

How to Find Corresponding Source Document: Diagnostic Report

- **ADT:** Clinical Info -> Encounters Tab -> Find Encounter from date/source listed



Thank You!
